

***** WARNING AND DISCLAIMER *****

A reasonable attempt will be made to keep the information on this website current. However, manufacturers can change the formulation of their products. In addition, many manufacturers and/or suppliers have not updated or made available their MSDS (Material Safety Data Sheet) information in SDS (Safety Data Sheet) format as required by law.

Consider your safety and that of others first. When an emergency involving chemicals occurs or someone's health and/or safety are affected, call **911** to summon assistance. If possible, provide them with information on the chemical involved.

Absent direction to the contrary, use your training from first aid, hazardous materials and/or other School courses to respond to a spill, situation or emergency involving chemicals. SDS and product labels/containers can be a good source of information on how to respond to an emergency, spill or situation involving that product. Information from manufacturer's web sites, product literature, internet sites and emergency numbers can also be useful.

Report all chemical spills and emergencies to your School supervisor.
